

Dataline *"accelerating your products' performance"*

Presentation of Dataline
and the ***DGate*** platform

Dataline

Company

- Dataline was founded in 1985 and is located in Borås, SWEDEN
- Dataline is owned and operated by brothers Kenneth and Tony Davidov
- We develop and produce microprocessor based control systems (built-in system)

Dataline

Qualifications

- Kenneth Davidov Master of Science in Electrical Engineering
- Tony Davidov Master of Science in Electrical Engineering
- Project / task
 - EMC surveys, UL, CE, EU directive
 - Electronics and program development

Dataline

Economics

- Our strong development capacity ensures a solid capital base
- Our solid capital base ensures our strong development capacity
- We have been profitable from day one, this makes us a safe partner

Dataline

Offer

”accelerating your products’ performance”

- Dataline develops unique products for controlling advanced systems and processes
- We have plenty of experience in solving both programming and technical design problems

Dataline Project & Products

- Vehicle computer / Police pilot
- ERP-system
- Elevator-control system,
- Dosage-equipment for the textile industry
- Control system for laser-cutter
- Safety system for doors
- Control system for personnel transports
- Energy solutions
- Image processing speed surveillance systems

Dataline

Worldwide

- Our products can today be found in most parts of the world
- Our products are installed in many different environments

Dataline

Focus

- Time
- Quality
- Technical height

Dataline

Time

- All electronics and software has a limited technical lifespan. Every day saved in development time is a day gained for making profit. Dataline has a proven strategy for this.

Dataline

Quality

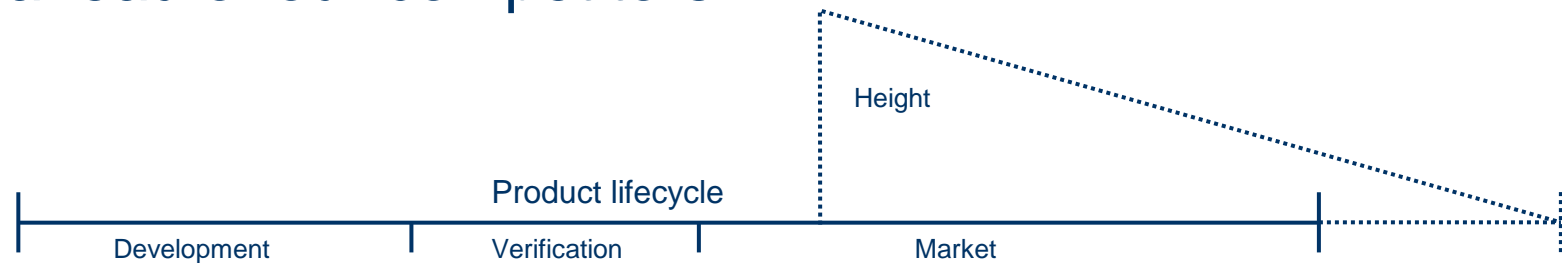

- Every product has to work. If it can't be used or produced any price is too high. Dataline ensures the highest quality and has a track record to prove it.

Dataline

Technical height

- Technical development moves at an incredible speed. We have introduced the concept of technical height to find the best solution. With our platform thinking we are always one step ahead of our competitors.

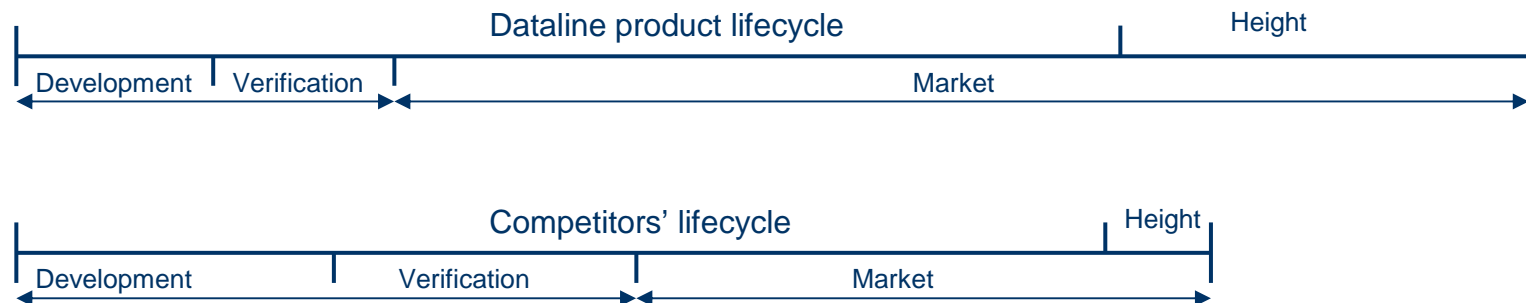

Dataline

Thinking

“zero administration”

- Intelligent products in shorter time
- Development resources in the final application
- One step ahead of our competitors

DGate

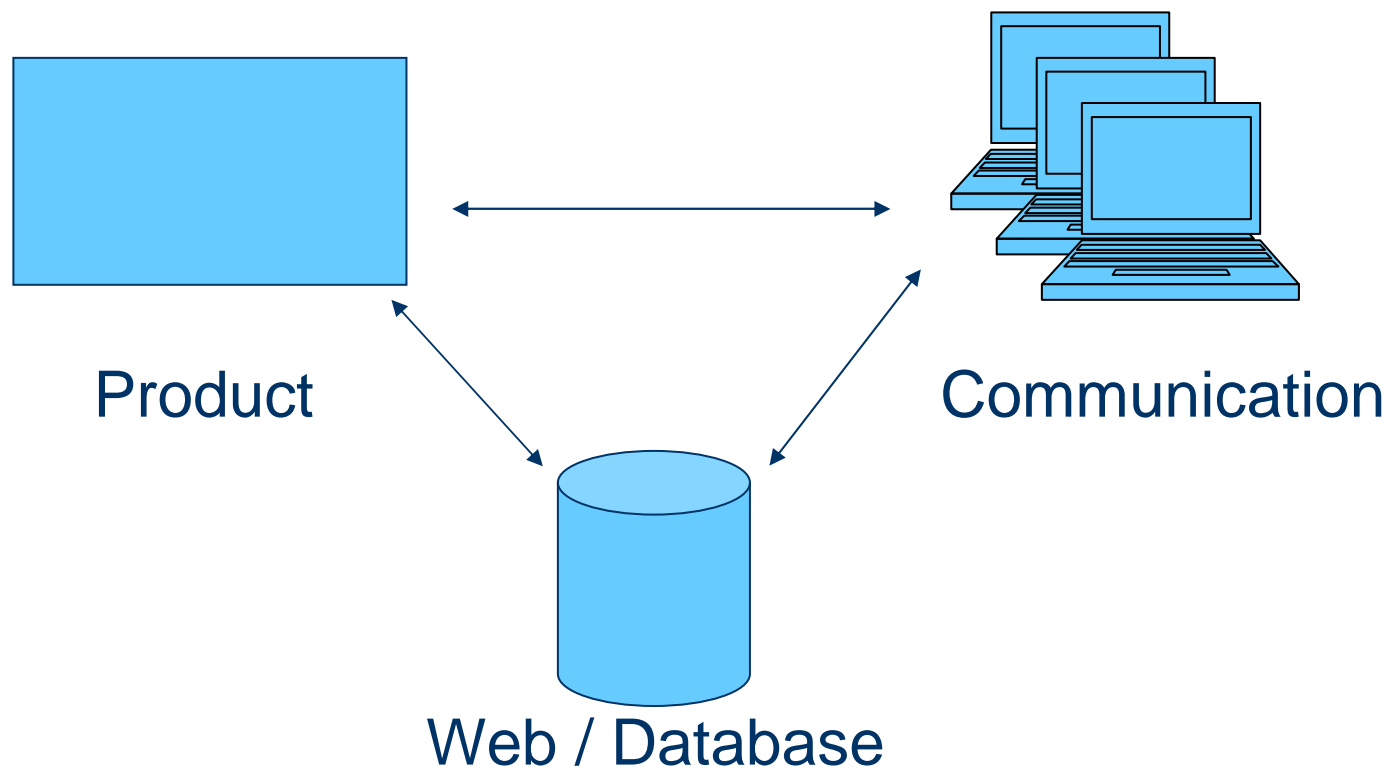

Platform

”zero administration”

- DGate is a modular design based on building blocks divided into hardware and software which can be combined to fit the customer's needs.

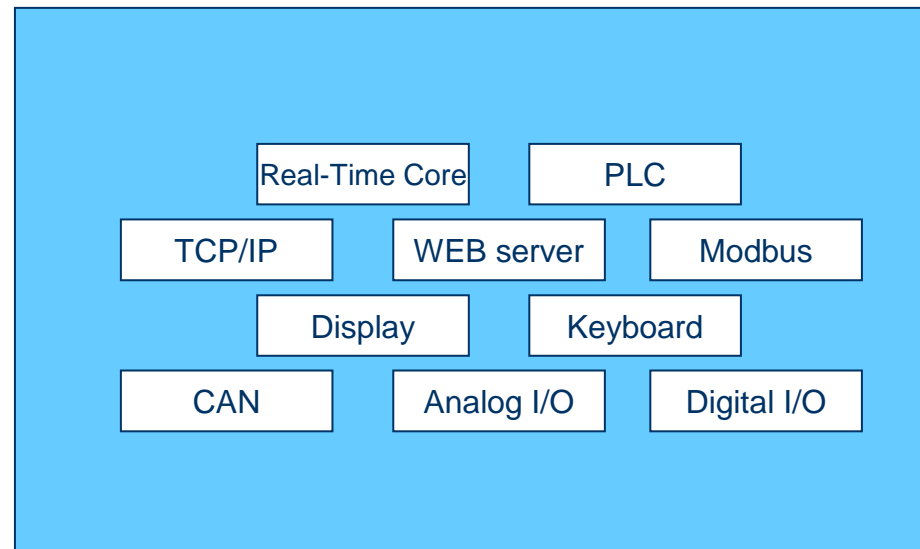

DGate

Platform

DGate

Product

DGate

Communication

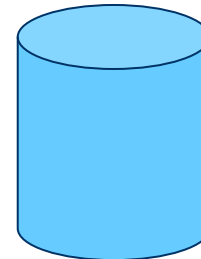

- TCP/IP, (GPRS, 10-Base-T)
- Supervision / Alarm
- Simulation / Education
- Steering / Modbus
- Diagnosis / Monitoring
- Production support
- Service tools

DGate

Web / database

- Data acquisition / Statistics
- Program updates
- Traceability
- Perimeter handling
- Recipe Handling
- Alarm, E-mail, SMS
- Remote support
- Quality follow-ups

Dataline

What we can do for you

“accelerating your products’ performance”

“zero administration”

- With your understanding of your customer’s needs, we at Dataline can find a tailor-made solution for you, based on the DGate platform and its standard building blocks. This means short development time, high quality and great technical height. You will receive a product at a low cost and with a long lifetime.
